

AUSTRALIAN MARITIME SYSTEMS LIMITED

AMS... YOUR PARTNER IN OIL SPILL MANAGEMENT

Australia operates under a coordinated plan entitled;
"The National Plan to Combat Pollution of the Sea by Oil and other Noxious and Hazardous Substances"

This plan defines the response procedures and utilizes strategic stockpiles of equipment located around Australia to meet any marine pollution threats. AMS has the skills to provide support and asset management services required to ensure timely and effective response capability as required under the National Plan.

EQUIPMENT USED FOR RESPONSE ACTIVITIES INCLUDES:

Oil spill control booms of varying types and sizes, self-propelled oil recovery vessels and skimmers, static oil recovery devices and sorbents. A range of storage devices including free standing tanks and towable storage bladders and bags complement recovery devices.

AMS staff have extensive training and experience in the management of oil spill cleanup and response, as well as equipment operation, maintenance and associated staff training. Staff are fully trained and accredited to national response Plan Tier 1 and Tier 2 levels and have worked on prior spills including the Kirki, MT Warrior, Iron Baron and Bulkazores. International work has also been undertaken in Singapore and PNG.

AMS operates an established and flexible asset management system, which allows full recording of all equipment parameters including maintenance history and condition. AMS is able to offer clients a full asset management service including oil spill response equipment maintenance, staff training and contingency planning.

AMS has an extensive network of Australia - wide and regional depots including New Zealand, which enables it to respond quickly to any threat or arising. Trained staff are always close to equipment storage enabling timely maintenance to be conducted.

OUR MISSION:

- ✕ To provide our customer's with a single source of oil spill recovery support services and equipment maintenance, with handling and services which are timely and cost effective.
- ✕ To understand our customer's needs and to fulfill them with products, systems and related services.
- ✕ Our focus is the delivery of an integrated system of products and services that uniquely surpass customer expectations.

Oil Spill

REGIONAL RISK ANALYSIS

AMS is strategically placed to meet potential marine pollution threats and support regional oil spill response activities. AMS support locations and trained staff are located throughout Australia and New Zealand.
