

AUSTRALIAN MARITIME SYSTEMS LIMITED

OVERVIEW

A key AMS capability is in the area of search & rescue and maritime life support equipment. This is a specialised skill set that can enhance the operations of many customers in the maritime & aviation sectors.

AMS has CASA certified service centres in Brisbane and Perth capable of handling a wide range of life support and SAR resources.

AMS's staff have been involved in the routine servicing, deployment and support of SAR assets for AMSA. Extensive experience with air-droppable and ship borne life support systems enables our technicians to offer high quality competitively priced service to customers.

AIRDEPLOYED RESCUE SYSTEMS

AMS Staff were at the forefront of development of Australia's air deployed rescue and life support systems. They have been actively involved in training and support activities for Australia's Civil SAR units under the direction of AUSSAR.

INFLATABLE LIFE SUPPORT SYSTEMS

AMS technicians are accredited life support fitters with backgrounds in both military and civil life support equipment. (Rafts, PFDs, Multi-raft systems, etc.) They maintain certification through a process of regular training and assessment to ensure the highest standards.

AMS service centres are equipped for and capable of handling a wide range of proprietary brand equipment. Operating under a robust quality system they deliver maximum reliability and customer satisfaction.

LOCATOR BEACONS

AMS's Electronics Support Facility can service a range of personal locator beacons and SAR support equipment. Their services integrate seamlessly with our two SAR Equipment Service Centres

DEPLOYMENT

Maritime assets are highly mobile and it is crucial that any service organisation has the skills and systems necessary to ensure trouble free deployment of equipment to meet the customers requirements.

AMS staff have extensive experience in the deployment and sustainability of life support equipment Australia wide. The quick turn-around of assets along with reliable transport is critical to ensuring that availability is maintained at the level desired by the customer. Our logistic support systems ensure trouble free deployment.

ON-SITE MAINTENANCE

AMS can perform on-site maintenance of some systems, depending on certification requirements, and this may offer an economical alternative for some remote locations.
